Relevant Experience

Business Relationship Analyst @ Central Piedmont Community College

April 2024 - Present // Charlotte, NC

- Builds and fosters relationships with stakeholders to understand technological needs of students, faculty and staff
- Creates required concise documentation following the stakeholders' need to improve processes and implement technology solutions
- Provides quality assurance to verify whether a software and the working team is well equipped to fulfill a specific need
- Works with solution engineers (SE's) to develop and validate solutions that meet business goals and objectives
- Applies data visualization and other visual modeling skills that help in capturing and communicating information visually

Senior Software Analyst @ Canidium

Nov 2021 - Feb 2024 // Remote

- Write high quality, scalable and modern code for a diverse array of clients while managing multiple projects.
- Work with a variety of different programming languages and tools such as HTML, SQL, Groovy, ICM, GIT and Salesforce.
- Communicate and collaborate amongst different Analyst, Project Managers, Consultants and Clients.
- Led implementations and system upgrades through gathering and documenting business requirements and designs directly with Clients, Lead Consultants and Analysts.

Software Analyst @ Encompass + Orchestra

May - Nov 2021 // Fort Collins, CO

- Interfaced with clients and daily, providing technological expertise and knowledge while supporting junior analyst.
- Traveled to job sites to build relations, deliver on site trainings and determine best practices for clients needs based on product usage.
- Built feature enhancements, custom reporting and implemented new solutions derived from customer needs and feedback using HTML, SASS and JavaScript.

Software Engineer Intern @ BrandX

Jan - April 2020 // Dublin, Ireland

- Collaborated with a small team of designers, developers and project managers to spearhead the user experience design as well as overall design of a new lottery mobile application using JIRA, Slack, Sketch and InVision.
- Worked closely with the CEO and lead designer to create presentations for stakeholders displaying the applications design and overall functionality
- Developed website and application pages using Sketch alongside a team of developers and designers. Tested both applications across multiple browsers and devices to ensure cross compatibility and mobile response.
